

The S.CF ALLROUND 20-45 container chassis

The reliable all-rounder for containers from 20' to 45'

Are you looking for the best solution for your container transport?
The new generation of our S.CF ALLROUND 20-45 container
chassis offers reliability all the way.

Why is the S.CF ALLROUND the best solution for you?

The new generation of container chassis combines optimum handling with a high level of safety. In addition, innovative equipment and ease of use make the S.CF ALLROUND the best choice.

Maximum flexibility and security

The S.CF ALLROUND container chassis is prepared for containers from 20' to 45' with and without tunnel. Front and rear extensions allow easy adjustment to the respective container sizes and offer maximum flexibility.

Simple handling meets intuitive operating concept

Among other things, the new telescopic underride guard at the rear, the mechanical front extension and the pneumatic rear extension ensure fast operation. The simplified user guidance is supported by clear operating videos directly on the vehicle.

The TrailerConnect® tyre pressure monitoring system with autolocation is included ex works

The container chassis is equipped ex works with TrailerConnect® telematics and the tyre pressure monitoring system. This provides you with all the necessary information about your vehicle. The tyre pressure monitoring system informs you if tyre pressures deviate from the preset value, reducing wear and tear and lowers fuel costs.

Flexible, secure, economical.

Quality is the top priority for all components. Our goal is maximum durability, which we achieve with the S.CF ALLROUND through our galvanised chassis, among other things.

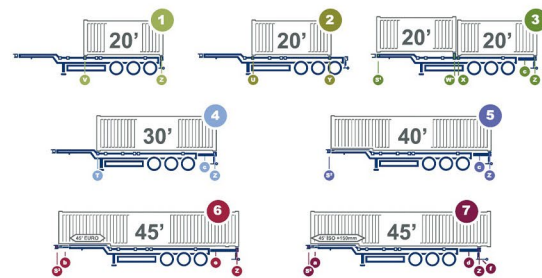

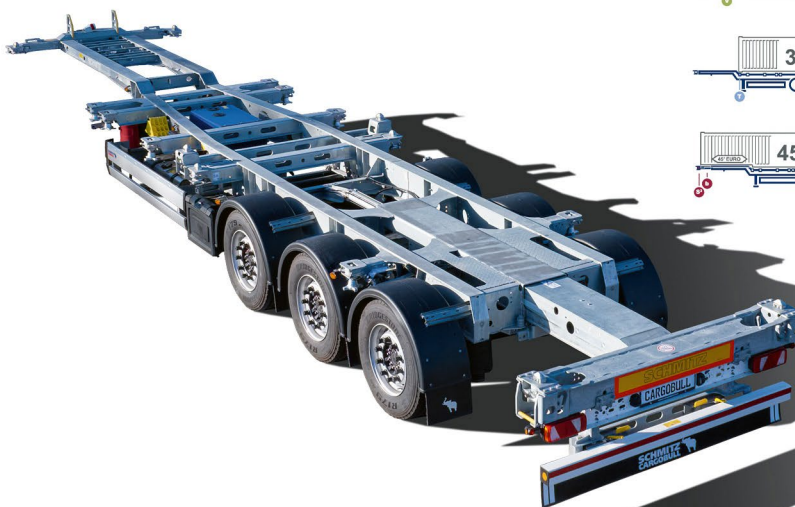

MULTI LOCK on the front beam with locking positions for tunnel containers with angled corners, straight corners and for containers without a tunnel, with positively guided plug-in locking.

With 2 x 20' loads, the height-adjustable **KLAPP LOCK** takes over the locking of the front container.

Mechanical front extension for 45' containers is spring-mounted on rollers and is easy and safe to handle.

Control for the pneumatic rear extension with manual locking.

New: The rear extension moves pneumatically to the selected locking position and brakes gently.

New design: The extendable underride guard for 45' containers is more ergonomic and easier and safer to handle with no loose parts to get lost.

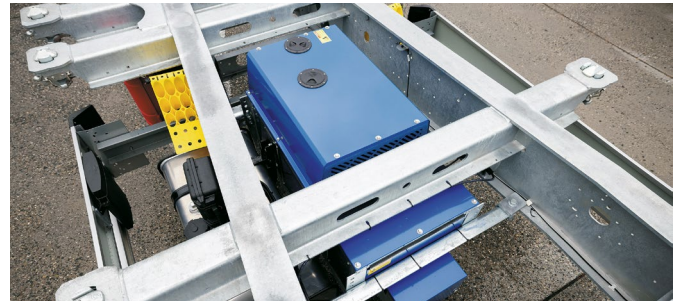

Intermodal transport - for every application and well thought out.

Extensive equipment options and services
ensure safe and smooth transport all the way.

Generator set with approx. 30cm ground clearance

For the power supply of refrigerated containers

The semi-trailer container chassis can be optionally
equipped with a generator set that operates the transport
refrigeration unit autonomously for several days and brings
temperature-controlled freight safely to the customer.

Service contracts

Customised for your container chassis

With the right service contract, you retain full control over
costs and we ensure that you always remain mobile, so you
can concentrate fully on your business.

You can rely on:

The Schmitz Cargobull premium services and the competent partner network.
