

Smart Service Package

More transparency than ever before:

The telematics tariff and proactive monitoring ensure 24/7 monitoring of the trailer and cooling unit. You receive early warnings in the event of breakdowns. In addition, the FleetWatch dashboard provides an overview of the fleet's condition and upcoming maintenance. In the future Predictive Maintenance for the cooling unit even recognises possible future failures for you up to 14 days in advance! This means that repairs can be planned at an early stage and damage to goods can be avoided.

This is included for you:

- As part of the Trailer Service and Cooling Unit Service, the Smart Service includes the **Trailer Connect® telematics tariff** and **proactive monitoring options**
- **FleetWatch dashboard as a “single point of truth”** for operational fleet management
- Problems are quickly recognised and specific recommendations for action are displayed
- **Overview of upcoming maintenance** for trailer, tyres & S.CU cooling unit
- Document storage per vehicle with automatic retrieval of maintenance and test reports

Good to know:

Predictive Maintenance in the future:

- Predicts possible failures up to 14 days in advance

Highlights:

Real-time monitoring and fault escalation using **Proactive Monitoring Trailer** by evaluating and processing EBS & telematics data.

Reduction of workshop visits thanks to the integration of a comprehensive **maintenance calendar** for scheduling and reminders.

Your advantages:

 Avoid failures through early warnings

 Real-time monitoring of fleet status

 Transparency about repair & maintenance requirements

 Increased efficiency through the ability to plan repair and maintenance
